

The Spanish start-up SRW (Space Robotics Workers) has been granted by Basque Government program HAZITEK for the development of lightweight deployable truss space structures. The project titled INDARRA is designing a truss – node crushable structure in composite as baseline structural module (a Basic Building Block, or BBB) for its for its envisioned Commercial LEO Destination (OO1). The program with 24 months duration started in early 2022, and will extend till end 2023, with prototyping and environmental space test of those BBB structural blocks prototypes.
